

Insect Panel Curtain

DIY Kit, Domestic

Keep insects out. Let fresh air in.

This DIY panel curtain system uses a series of mesh panels suspended from a rail, with two central panels that slide to the side, making access easier than traditional fixed panel curtains.

How It Works

Multiple vertical mesh panels hang from a top rail, with weighted bottoms to help keep them in place.

The two centre panels can be slid aside, creating a clear opening when needed, while the remaining panels continue to provide coverage across the doorway.

Sizes & Suitability

- Suitable for door openings up to **95cm (W) x 235cm (H)**
- Each mesh panel is approximately 27cm (W)
- Can be trimmed and adjusted during installation if required
- Multiple kits can be fitted side by side to cover wider openings, creating a continuous screen across the doorway

Key Features

- DIY kit only
- Screw fix installation only
- Black mesh panels
- Grey rail system
- Sliding centre panels for easier access
- Weighted panels to help reduce movement in light airflow
- Suitable for installation inside or outside, depending on door configuration

Before You Order

- Make sure you have enough flat surface around your doorway to fit the rail securely.
- Check how your door opens to determine the best fixing position
