

Commercial Screens for Windows

Keep insects out. Let fresh air in.

A robust, made-to-measure aluminium insect screen designed for commercial windows. Available as either a fixed or hinged screen, it can be fitted to the existing window frame or to the wall outside the reveal.

The white powder-coated aluminium frame is supplied with grey insect mesh as standard and includes a brush pile seal around the frame. For larger screens, a midbar may be added for additional support.

Why Choose This Screen?

Designed for commercial environments, this screen uses a robust aluminium profile with mitred corners for a strong, neat finish.

The hinged version provides easy access to the window for opening, closing and cleaning, while the fixed version offers a simple, secure option where regular access is not required.

Each screen is made to your measurements and supplied ready for you to fit.

Screen Options

Hinged Screen - Fitted using side hinges and held closed with magnetic catches. This allows the screen to be opened when access to the window is required.

Fixed Screen - Screwed directly to the existing window frame or surrounding wall.

Product Details

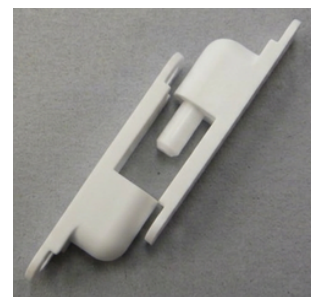

- Powder-coated aluminium frame (white as standard)
- Optional midbar for additional support on larger screens
- Grey insect mesh as standard
- Made-to-measure
- Can be fitted inside or outside the window frame

Before You Order

Please ensure:

- You have enough flat surface around your window for the frame to sit against
- You have allowed space for any handles or fittings
- You have measured carefully – all screens are made to your supplied sizes

Commercial Screens for Windows

Measuring Instructions

Step 1: Measure the Opening

Measure the width in three places – top, middle and bottom – and use the smallest measurement.

Measure the height in three places – left, centre and right – and use the smallest measurement.

Step 2: Check Flat Surface

You will need 28mm of flat surface on each side for the frame to sit against.

If space is limited, a minimum of 10mm can work, but the frame will overlap slightly into the opening.

Step 3: Calculate Your Size

Add 56mm to both the width and height:

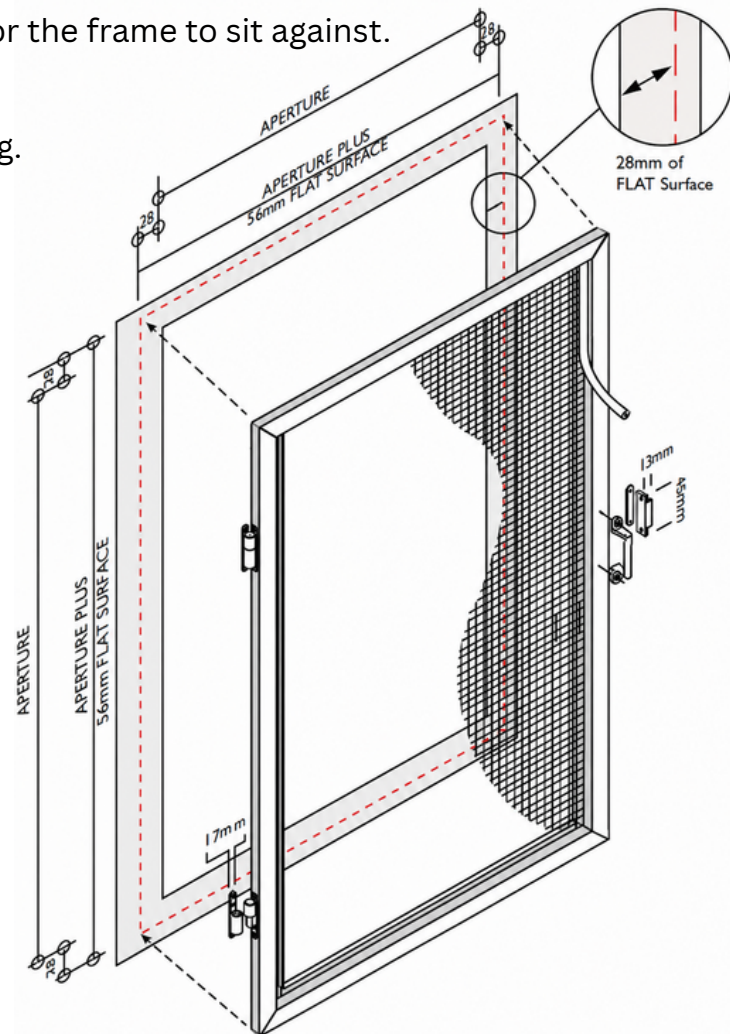

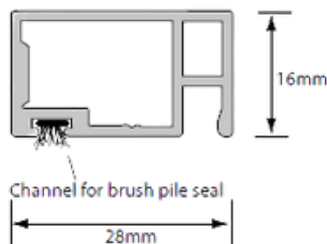

- Width = aperture + 56mm
- Height = aperture + 56mm

For Hinged Screens

For hinged screens, you will also need enough additional flat surface to fit the hardware:

- 17mm for the hinges
- 13mm for the magnetic catch

These additional amounts are for fitting only – do not add them to your manufacturing measurements.

Important Notes

- Always measure in millimetres (mm) and provide sizes as width × height
- Include any bevelled edges in your measurements
- All screens are made to your measurements (±2mm tolerance applies), so it's important to measure carefully.
- No allowances or deductions are made by us
- Double check your measurements before ordering
